Action Replay Pxs Rom

g 128k)Caetla - Caetla+Unrom combined ** (Carts > 128k) *Plugin - Has shendo's MCLaunch as an optional add-on. ** You can add your own plugins to any rom that isn't already _PLUGIN_ *** This is a version of Caetla pre-set to NTSC. Doesn't crash. Skipped many version numbers arbitrarily - I find weird things amusing. - Miniupdate. Just stuffed Squaresoft's complete rom collection into the zip/Refresher:-Standalone - Use on smaller carts (E. 34 for caff/ptc; over LPT)-X-Flash (for X-Killer over LPT)-PSXSerial 1.3 (for use with PSXSerial over serial)-MYAR (Fox Chen Hong's third party AR style command)with Switch on = CaetlaLoad with Switch off = UnROM screen# Caetla screens: nocash unlock is automatically applied for Eur/US systems- disk autowrap is applied for Jap/Unknown systems. - UnROM screen (supports MYAR/PAR protocol)included in the download.PC Side: PSXSerial 1. Download - V6, 16_09_2010http://sicklebrick.com/wp-downloads/sicklebrick.com_unrom_release_v6. 3 (Shadow & Jihadi)- MyAR (Fox Chen Hong)- X-Killer & Gio40 (Tim Schuerwegen & Siskley)- Carlap0 (Innar Technologies & Orin)_9PSX Side:- 234kb Full version with Caetla (or MPlayer/PAR, etc. - (Plan a pre-saved NTSC version for MPX carts)- 112kb Lite version without caetla (128kb carts)- ISO With X-Flash + All Caetla, All PSXrec, UnROM Lite, UnROM Full/Item with Ingthorn @ slower speed; boot with swap trick or whatever;0k6; .bin is a pretty experimental build but fixes a bunch of issues.

Unrom Combines:Major update: GUI, nocash unlock and fastboot Unrom Combines-Caetla 0. Don't get me wrong: this was a lot of work, but as you can see, overall it quite heavily relies on other people's software, so big thanks to everyone. ** NTSC - Use for Jap/American consoles ***Release Notes:-Built in Serial Comms:- Removed embedded PSXSerial- Experimental. If you're wondering where to start, X2 is the new boot sequence which auto-applies the unlock. -Thanks/Credits:(All original authors are credited in the zip for their respective contributions/Orin, _Innar Technologies, Fox Chen Hong, Shadow, Jihadi/HITMEN, Sliphead/HITMEN, Tim Schuerwegen, Bang/Nipalm, Car, K.Cromm, Herbert, GMDyn, Type '9, Inc/Lightforce, mecaboth0, T0M0k0, Squaresoft/14 and all your lovely PSX Peeps. -# UnROM screen: Triangle + Load (f/h) supports X-Killer/Killer) Circle + Load PSXSerial (supports PSXSerial) Square = boot to PSX BIOS (supports 2bit colour) Cross = Menu Selection L1 = Disk Swap R1 = nocash unlock Star/Select = Caetla Some other menu options and hidden button combos. Further Notes:The patched BIOS boot is not working on the really old BIOSes I could take a stab but without a console in front of me, you'll have to make do with one of the following boot methods: fastboot, caetla fastboot, caetla fullboot, caetla via CDROM menu. Use if for example X-Flash supports writing to your EEPROM, but Caetla doesn't (so it won't be able to save settings once it's on there). -BIN upload (PC tool coming soon)- More room for plugin!-Improved shell boot sequence:- Uses BIOS's own boot routine- Will warn if you have really old unsupported bios (working on it)-Improved fastboot- Displays status- Fixes a few errors-Cheat codes- Caetla now has them...-noNotes* Switch between them at the menu or with the switch atop the cartridge.
